

MAFI Equipment

Goosenecks, Parking Stands and Ballast Weights

With a wide range of equipment, MAFI Transport-Systeme GmbH is a real system supplier. MAFI offers various goosenecks and ballast weights for your heavy-duty tractor. And if you use a forklift, MAFI also has the right gooseneck for your forklift operation.

Gooseneck for Tractors

MAFI Goosenecks Type SH 36 / SH 45 / C-Hook

A MAFI gooseneck is used to pull roll / cargo trailers. A detachable gooseneck is only coupled onto the tractor's 5th wheel hitch when necessary, which means, the tractor remains flexible and can still be used to move semitrailers. The gooseneck is selected based on the fifth wheel capacity of the tractor. System loads of up to 250 tons are possible.

Gooseneck for Forklifts

MAFI Goosenecks Type GSH 10 / GSH 16

The forklift gooseneck (GSH) is specially designed for the safe transport of roll trailers with a forklift. This combination can move payloads of up to 50 tons. This simple transport solution enables companies to carry out their internal logistics tasks safely and quickly, and it also reduces costs. Forklift goosenecks are available with a manual bolt lock or with an automatic locking mechanism forklifts with hydraulically adjustable forks. The mounting plate for the forks is individually designed to fit your exact forklift.

Ballast Weight

MAFI Ballast Weights for Tractors

The traction plays a crucial role in pulling drawbar trailers. For this purpose, a ballast weight can be mounted on over the rear axle of the tractor. There are both permanent or detachable versions available. Fixed ballast weights are permanently mounted on a tractor. Detachable ballast weights, on the other hand, can be parked on a separate frame and can be picked up by a tractor with an elevating 5th wheel hitch.
